

Practical Issues 2023: Deviously Seeking Duping Delight in the Dark

LittleMonkeyLab

Dr. Gordon Wright 

g.wright@gold.ac.uk

October 31, 2023

Overview

As Module Coordinator of Y2 Research Methods - give some forward-looking guidance!

Do the 'Lie of the Land' survey - tap your deception expertise!

BREAK - 10-15 mins

A brief overview of my research

Today's Target Paper

Questions (*of which I hear you usually have many!*)

*From one Researcher to
another... I mean YOU!*

A brief introduction

Dr. Gordon Wright

Lecturer in Psychology

Module Coordinator - Y2

Research Methods

g.wright@gold.ac.uk

But who are you?

What do I need to know?

Why did you choose to study at Goldsmiths?

Why Psychology?

Why does that matter this year?

This module is designed to try to give you a glimpse of real psychological research - and introduce some of the real challenges

PS51010C - Extended Essay

- 3000 words MAX
- 4 x Target Articles (Empirical from the last 3 years)
- You choose your own topic!
- Make sure to really delve into the **Methods** employed! Really scrutinise the tasks!

More opportunities next year

Once you've started your Research Journey
Summer Bursary Competition - a number of weeks of paid research experience

Final Year Dissertation

45 Credit Module - Independent Research Project
1:1 with a member of staff

Whatever topic you can agree on (excluding
children/clinical/forensic samples)

For the aspiring researcher

In December of your final year you can apply for a 1+3 funded MSc & PhD position

Research opportunities available all the time. . .

You are able to ask to join a lab or work with a member of staff at any time

Some labs have regular meetings and are open to volunteers, some are more informal or even work on a 1:1 basis

If you like the research somebody is doing, go and knock on their door!

Tips and Tricks

Tip Number 1

Start poking around in Academic Journals.

My favourite way to do this is the app Browzine
on your computer AND your phone

[Browzine via the Library](#)

Tip Number 2

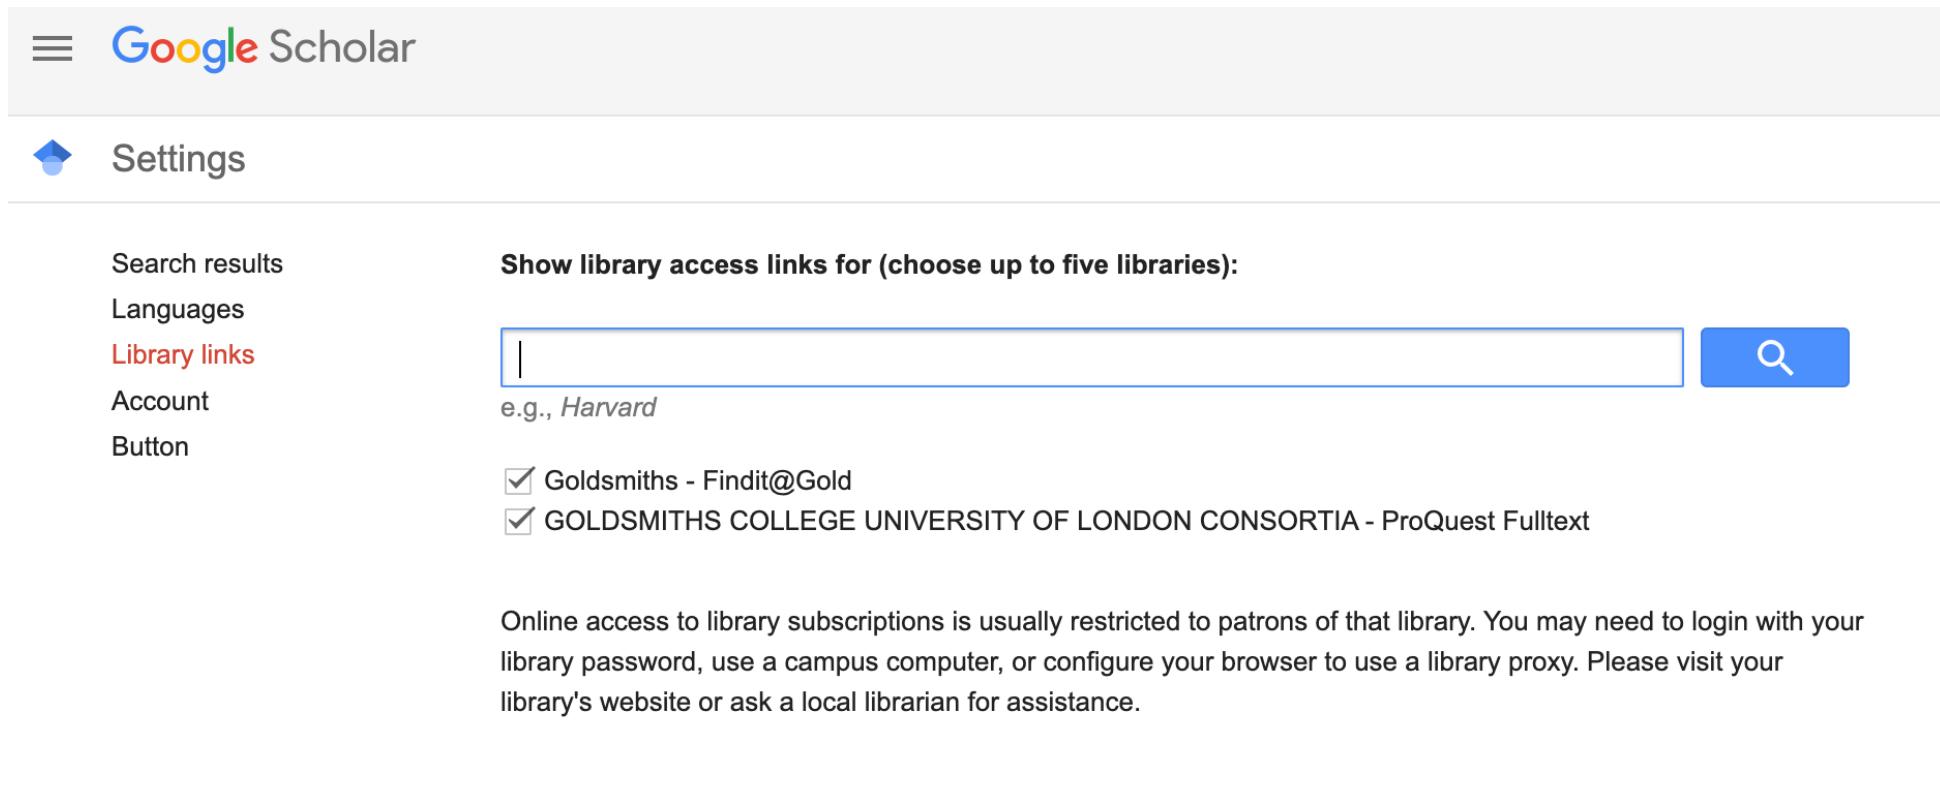

Get to grips with the Library

<https://libguides.gold.ac.uk/psychology>

Tip Number 3

Make Google Scholar your own

The screenshot shows the 'Settings' page of Google Scholar. On the left, there's a sidebar with options: Search results, Languages, Library links (which is highlighted in red), Account, and Button. The main area has a heading 'Show library access links for (choose up to five libraries):'. It includes a search bar with placeholder 'e.g., Harvard' and a blue search button with a magnifying glass icon. Below the search bar are two checked checkboxes: 'Goldsmiths - Findit@Gold' and 'GOLDSMITHS COLLEGE UNIVERSITY OF LONDON CONSORTIA - ProQuest Fulltext'. A note at the bottom states: 'Online access to library subscriptions is usually restricted to patrons of that library. You may need to login with your library password, use a campus computer, or configure your browser to use a library proxy. Please visit your library's website or ask a local librarian for assistance.'

≡ **Google Scholar**

 **Settings**

Search results **Show library access links for (choose up to five libraries):**

Languages

Library links

Account

Button

e.g., Harvard

Goldsmiths - Findit@Gold

GOLDSMITHS COLLEGE UNIVERSITY OF LONDON CONSORTIA - ProQuest Fulltext

Online access to library subscriptions is usually restricted to patrons of that library. You may need to login with your library password, use a campus computer, or configure your browser to use a library proxy. Please visit your library's website or ask a local librarian for assistance.

Tip Number 4

Strategic Searching & Literature Management

[ResearchRabbit.ai](#) and [Zotero](#)

Always keep your eyes open for

[Annual Reviews of Psychology](#)

Systematic Reviews and Meta-Analyses (Google Advanced Search!)

Let's get going!

The link to our study for today is available on the VLE. It's called the 'Lie of the Land' study

2.5 Credits available today/this week

The study link

THE DARK TRIAD OF PERSONALITY

So why do people lie? (levine2010d?)

It ain't that bad really!

Deception frequency is significantly correlated to neocortical volume across species ([byrne2004a?](#)).

Evolution selects for more and more effective strategies of achieving social success (including deception, manipulation, alliance formation, exploitation of the expertise of others, etc.)

And for the ability to learn and use such strategies.

Social success translates into reproductive success!

Monkey Business see ([shultz2022?](#))

Observations of non-human behaviour of the type led scientists to suggest a positive relationship between brain size and social group size.

A bigger brain seems to be found in more complex social environments. But bigger brains are costly.

There has to be a benefit to carrying around this big brain.

The dynamic social environment see (whiten2018?)

...

The social world is very complex and the characters in this social world are difficult to predict.

...

We usually operate within a status hierarchy which predetermines our opportunities. Think of our cheeky little monkey. What did he want?

- Access to food
- Access to shelter
- Access to mates
- Safety and Security of self and offspring

The Machiavellian Intelligence Hypothesis ((byrne2018?))

The Machiavellian Intelligence Hypothesis posits that social demands have driven the evolution of the cognitive facilities humans employ to navigate their social domain.

‘Machiavellian’ strategies, such as deception, interpersonal manipulation, cooperation, and alliance formation allow individuals to achieve higher social and reproductive success.

...

Maybe it would help to be a bit more “Machiavellian”?

But how can we possibly measure ‘Lie Frequency’?

Self- or other-report

Diary study (or similar)

Some kind of app?

Motion capture suits and TV cameras?

Experimental, lab-based research

Machiavellianism

Sensitive to social context, and will switch quickly between cooperation and competition depending on utility

Endorse emotional manipulation and use emotional skills to ingratiate

Comprises a cynical view of human nature and interpersonal manipulation tactics (perception of the world and behaviour)

Narcissism

Vain, ‘grandiose sense of self’, with high levels of entitlement

The Narcissist is unique and special

Narcissists, as a result of being surrounded by ‘mere mortals’ may show reduced empathy for others and disregard their goals or status

Narcissists maintain their grandiose sense of self by seeking out praise, adoration, adulation and avoiding realistic feedback

Grandiose/Vulnerable distinction is starting to get hold.

Psychopathy

Manifest disregard for other people - Low empathy, disruptive behaviours verging on bullying or sadism, deception thought to be a central feature.

Superficial charm and glibness. Erratic lifestyle factors and high impulsivity. Extreme reward appetite and low fear of loss or punishment. Often related to criminal activity.

Boldness, Meanness, Disinhibition is the 3 Factor structure suggested by the Triarchic Model (Patrick 2010, onwards)

Bonus prize - Sadism

As part of the Dark Tetrad, sadism is investigated in its subclinical manifestation—***everyday sadism***.

When people enjoy watching violent movies or even playing violent games as a social escape to manifest their sadistic traits it is referred to as ***vicarious sadism***.

There is sometimes an alternative aspect called ***direct sadism***, but it is actually far too rare to be useful in most studies.

In turn, higher scores in everyday sadism are associated with injuring others verbally, physically, and/or psychologically, inspired by a hedonic value of being cruel.
